Other technical details

Range : These Laminates comes in a wide range of designs, colors & finishes.

Adhesive : These Laminates are easy to apply with the laminating system, including most of the conventional adhesives normally used with plastic laminates such as many water based and solvent based like fevicol pro-bond. We do not recommend the use of heat activated adhesives. We do not recommend any kind of coat like PU base melamine, lamination (WAX) on our product. These products are manufactured from natural resources. Therefore this application will spoil the originality and natural beauty of the laminate sheet.

Cutting & Machining : These Laminates can be cut, routed and drilled, with the most standard wood working tools or equipments. All blades must be sharp. To remove any burr that may occur in the cutting processes, we recommend the use of smooth file to feather all corner edges.

Bending & Forming : These Laminates can be bend and all radius bending should be handled in the same manner as all grades of non post forming decorative laminates. Kindly use special blades to bend the sheets at 90 degree. For any difficulties please contact KAKA INDUSTRIES.

Maintenance : Any cleaning agent containing, Alkalis or abrasive should not be used to clean the laminate. Exposure to sunlight should be avoided.

Important Note : Kindly remove the protective film within 5 days from the date of Installation.
